socioeconomic structures download: Energy Use in Cities Stephanie Pincetl, Hannah Gustafson, Felicia Federico, Eric Daniel Fournier, Robert Cudd, Erik Porse, 2020-09-25 In an era of big data and smart cities, this book is an innovative and creative contribution to our understanding of urban energy use. Societies have basic data needs to develop an understanding of energy flows for planning energy sustainability. However, this data is often either not utilized or not available. Using California as an example, the book provides a roadmap for using data to reduce urban greenhouse gas emissions by targeting programs and initiatives that will successfully and parsimoniously improve building performance while taking into account issues of energy affordability. This first of its kind methodology maps high-detail building energy use to understand

patterns of consumption across buildings, neighborhoods, and socioeconomic divisions in megacities. The book then details the steps required to replicate this methodology elsewhere, and shows the importance of openly-accessible building energy data for transitioning cities to meet the climate planning goals of the twenty-first century. It also explains why actual data, not modeled or sampled, is critical for accurate analysis and insights. Finally, it acknowledges the complex institutional context for this work and some of the obstacles – utility reluctance, public agency oversight, funding and path dependencies. This book will be of great value to scholars across the environmental sectors, but especially to those studying sustainable urban energy as well as practitioners and policy makers in these areas.

It gathers the best contributions to the 1st International Conference on Mapping and Spatial Analysis of Socio-Economic and Environmental Indicators for the Local and Regional Sustainable Development. The conference was held in southern Tunisia, Tataouine in March 2015. The research studies focused on generating and analyzing indicators in various domains of Agriculture, Energy, Industry, Tourism, Transport, Urban Planning, Exploitation of Natural Resources, Infrastructure, Health, Environment, Education, Information and Communication Technologies, Social Affairs and Employability, and Culture and Sport. Socio-economic and environmental indicators are important in regional development plans and strategies as they allow to observe and analyze changes in the economic growth and to measure their impact on the environment and on social networks/daily life of citizens. On the basis of well-defined geomatic approaches, and particularly, through sophisticated digital mapping and spatio-temporal analyses, authors focused on retrieving indicators to evaluate the exploitation rate of natural resources, intensity of the energy consumption in various economic sector, net migratory flows, quality checking of the air in urban areas, adaptation to climate change, and vulnerability of the coastal domain and risk of marine submersion due to sea-level rise. The book is of interest not only to investors and contributors to regional development projects, but also to all relevant policy makers.

socioeconomic structures download: *The Human Society and the Internet: Internet Related Socio-Economic Issues* Won Kim, Tok-Wang Ling, Yoon-Joon Lee, Seung-Soo Park, 2003-06-29 During the past several years, the world has entered the first phase of the Internet Revolution. Investors showed confidence and faith in the prospects of the Internet driven economy. In the US alone, some 30,000 dot com companies have sprung up to support electronic commerce with a wide variety of business models, technologies, and/or items or services to sell or even give away. Traditional businesses, so called brick and mortar, or offline, businesses, have started to respond to challenges by Internet based new competitors by augmenting their own businesses with Internet based, or online, businesses and/or filing lawsuits against them. The initial business to consumer orientation of electronic commerce is giving way to business to business commerce, with

large corporations forming electronic exchanges or consortia to conduct commerce among members. Government, industry, and civic groups have started addressing social issues related to the Internet, such as taxation on electronic commerce, privacy, intellectual property rights, security, hacking, cyber crimes, digital divide, etc. Governments have started legitimizing electronic signatures and stepping up efforts to track down perpetrators of cyber crimes. The courts have started to wrestle with issues of privacy, intellectual property rights, crimes, and impediments to Internet driven economy.

socioeconomic structures download: Socio-Economic Considerations in Biotechnology Regulation Karinne Ludlow, Stuart J. Smyth, José Falck-Zepeda, 2013-12-03 Within the context of the Convention on Biological Diversity (CBD), the Cartagena Protocol on Biosafety (CPB) was established as an implementing agreement. The CPB is an international agreement establishing the rights of recipient countries to be notified of and to approve or reject the domestic import and/or production of living modified organisms (LMOs). Decisions regarding import/production are to be on the basis of a biosafety assessment. Article 26.1 of the CPB allows for the (optional) inclusion of socio-economic considerations (SECs) into that biosafety assessment process. This book compiles expert assessments of the issues relevant to SEC assessment of LMOs and fundamental for decisions regarding whether to undertake such assessments at all. It includes an overview of the inclusion of SEC assessment in the regulation of LMOs that looks at the rationale for the inclusion of SECs, in the context of the existing science-based risk assessment systems. This book reviews the various factors that can and have been suggested for inclusion in SEC assessment, and provides a meaningful dialogue about the contrasts, benefits and tradeoffs that are, and will, be created by the potential move to the inclusion of SECs in the regulation of LMOs, making it of interest to both academics and policy-makers.

socioeconomic structures download: Harmonising Demographic and Socio-Economic Variables for Cross-National Comparative Survey Research Jürgen H.P. Hoffmeyer-Zlotnik, Uwe Warner, 2013-10-07 This book explains harmonisation techniques that can be used in survey research to align national systems of categories and definitions in such a way that comparison is possible across countries and cultures. It provides an introduction to instruments for collecting internationally comparable data of interest to survey researchers. It shows how seven key demographic and socio-economic variables can be harmonised and employed in European comparative surveys. The seven key variables discussed in detail are: education, occupation, income, activity status, private household, ethnicity, and family. These demographic and socio-economic variables are background variables that no survey can do without. They frequently have the greatest explanatory capacity to analyse social structures, and are a mirror image of the way societies are organised nationally. This becomes readily apparent when one attempts, for example, to compare national education systems. Moreover, a comparison of the national definitions of concepts such as private household reveals several different historically and culturally shaped underlying concepts. Indeed, some European countries do not even have a word for private household. Hence such national definitions and categories cannot simply be translated from one culture to another. They must be harmonised.

socioeconomic structures download: Decoding the Socio?Economic Approach to Management John Conbere, Henri Savall, Alla Heorhiadi, 2015-09-01 In May 2014, the French research laboratory ISEOR (Socio?Economic Institute for Firms and Organizations) and the University of St. Thomas co?sponsored a second conference on the application of the Socio?Economic Approach to Management (SEAM) paradigm and methodology in the United States. SEAM is a scientific approach to consultancy that focuses on uncovering the dysfunctions and hidden costs that exist in organizations, "hidden" in the sense that they are not captured by traditional accounting methods and financial analyses. Through intervention that encompasses the entire organization - what the ISEOR team refers to as the HORIVERT approach (combining horizontal and vertical intervention) - the underlying goal is to enhance organizational performance

by attacking the “TFW virus,” a vestige of the early work by Frederick Taylor, Henri Fayol, and Max Weber that has sufficiently infiltrated our thinking about management and organization to the point where are falling well short of our own potential. The resultant dysfunctions this virus unleashes creates hidden costs that readily destroy a firm’s value?added possibilities. The volume captures the ideas, applications, and exchanges of that meeting, attempting to bring the reader into the conference itself. Chapters include the contributors’ presentations (“Chapter Prologue: Conference Remarks”), revised conference papers, and the question and answer dialogue for the session.

socioeconomic structures download: Human and Technological Progress Towards the Socio-Economic Paradigm of the Future Elena G. Popkova, Marina Alpidovskaya, 2020-08-24 This book develops a socio-economic paradigm of the future in the context of digital transformation. The challenge of economic openness is considered through the globalization of the world economic system by the example of modern Russia. The tendency of archaization of socio-economic relations is explored which is connected with the gradual disappearance of ineffective institutes and their replacement by new institutes. Attention is paid to the regional aspect of the digital economy – perspectives of development of the ethno-economy in the context of integration of regional economic systems are determined. The problem of preserving social identity and supporting the uniqueness of competitive advantages of the region’s economy in the conditions of digitization is actualized, and its perspective solutions based on a region’s globalization management are offered. Also, the problem of national and regional food security is considered. Increased social significance of the agro-industrial complex and the necessity for its de-economization on the platform of the digital economy are substantiated. A new concept of the market economy in the conditions of digitization and the Fourth industrial revolution is developed; economic power of technological progress and possibilities of managing and re-directing this power are determined. The authors substantiate the transition to the Sixth technological mode and the related transformation processes in the economy. Also, the authors dwell on the problem of the shadow economy and corruption and consider the perspectives of its overcoming based on the possibilities of digital technologies. The idea of de-regulation based on the possibilities of automatization and AI is opposed to the idea of increase of state regulation based on ubiquitous computing and digital monitoring of economic activities. The perspectives of increasing the economy’s transparency in the digital age are proved. The alternatives to the current model of development of the digital economy are given, and scenario analysis of consequences of observing these models based on the cognitive approach is performed. New opportunities for development of the integration processes in entrepreneurship in the conditions of the digital economy are shown – in particular, in the aspect of inter-regional and transnational sectorial clustering. Clusters are considered as growth points of the Russian economy, and the new Russian experience of formation and development of clusters in the sphere of higher education in the context of region’s economy is studied. The authors determine the contribution of key technological events in the development of entrepreneurship through the example of modern Russia. They come to the conclusion that despite the unique possibilities digital technologies do not necessarily create additional value for entrepreneurship, and their application could be ineffective due to additional capital expenditures in case of complexity of return of long-term venture investments. The needs of entrepreneurship for innovative infrastructural provision in the context of the digital economy are determined, and barriers on the path of its creation and practical application due to necessity for applying new forms of business organization are shown. Specific features of state management of a region’s economy in the conditions of digital modernization are shown, and the modern Russian practice of e-government as a response to the modern challenges is studied. The authors outline new perspectives of development of public-private partnership as an effective direction of industrial and cluster policy of a modern region.

socioeconomic structures download: Rural Socio-Economic Transformation: Agrarian, Ecology, Communication and Community, Development Perspectives Rilus A. Kinseng, Arya Hadi Dharmawan, Djuara Lubis, Annisa Utami Seminar, 2019-07-24 Most of Indonesian population live in rural areas, and the majority of poor people also live in rural areas, namely 13.47% in rural

and 7.26 in urban. In the past decades, rural communities as well as the ecology have changed fundamentally. Many factors contribute to this transformation: development programs from the government as well as from private and NGOs; the diffusion of information technology; the development of transportation facilities; the rise of education and health levels, interaction with outsiders, and so on. A main driving factor for rural development has been agrarian liberalization. This can be seen in the development of transnational plantations, which trigger land grab and rise of land demand. Development through liberalization also had a negative impact, since the development of modern and industrialized agriculture affected the environment, and the expansion of plantations caused changes in the agricultural systems of villages and the life orientation of local communities. Interventions in villages by private companies, intermediary institutions no doubt have brought structural transformations in rural life: local institutions, livelihood systems, population structures, ecosystems, and relation to the land. Unfortunately, the social, economic, cultural, and ecological transformation of the rural community not always produces improvement of quality of life for the rural community. At the same time, information and data related to rural transformations are scarcely available at research institutions, universities, NGOs, private enterprises. Rural Socio-Economic Transformation: Agrarian, Ecology, Communication and Community, Development Perspectives discusses many aspects of the social, economic, cultural, and ecological transformation of rural life in Indonesia, and is of interest to academics and policy makers interested or involved in these areas.

socioeconomic structures download: Socioeconomic Inequality and Student Outcomes Louis Volante, Sylke V. Schnepf, John Jerrim, Don A. Klinger, 2019-08-31 This book examines socioeconomic inequality and student outcomes across various Western industrialized nations and the varying success they have had in addressing achievement gaps in lower socioeconomic status student populations. It presents the national profiles of countries with notable achievement gaps within the respective school-aged student populations, explains the trajectory of achievement results in relation to both national and international large-scale assessment measures, and discusses how relevant education policies have evolved within their national contexts. Most importantly, the national profiles investigate the effectiveness of policy responses that have been adopted to close the achievement gap in lower socioeconomic status student populations. This book provides a cross-national analysis of policy approaches designed to address socioeconomic inequality.

socioeconomic structures download: Socio-Economic Segregation in European Capital Cities Tiit Tammaru, Szymon Marcińczak, Maarten van Ham, Sako Musterd, 2015-07-24 Growing inequalities in Europe are a major challenge threatening the sustainability of urban communities and the competitiveness of European cities. While the levels of socio-economic segregation in European cities are still modest compared to some parts of the world, the poor are increasingly concentrating spatially within capital cities across Europe. An overlooked area of research, this book offers a systematic and representative account of the spatial dimension of rising inequalities in Europe. This book provides rigorous comparative evidence on socio-economic segregation from 13 European cities. Cities include Amsterdam, Athens, Budapest, London, Milan, Madrid, Oslo, Prague, Riga, Stockholm, Tallinn, Vienna and Vilnius. Comparing 2001 and 2011, this multi-factor approach links segregation to four underlying universal structural factors: social inequalities, global city status, welfare regimes and housing systems. Hypothetical segregation levels derived from those factors are compared to actual segregation levels in all cities. Each chapter provides an in-depth and context sensitive discussion of the unique features shaping inequalities and segregation in the case study cities. The main conclusion of the book is that the spatial gap between the poor and the rich is widening in capital cities across Europe, which threatens to harm the social stability of European cities. This book will be a key reference on increasing segregation and will provide valuable insights to students, researchers and policy makers who are interested in the spatial dimension of social inequality in European cities. Chapters 1 and 15 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 3.0 license.

socioeconomic structures download: Women, Feminism, and Femininity in the 21st Century B. Mousli, E. Roustang-Stoller, 2009-05-11 American women look at French women as having it all: sex, motherhood, work, and public office, while French women look at American women as puritanical, excessively feminist, and unable to have it all without guilt. The essays in this book by leading American and French academics and critics set the record straight by assessing the truth of each outlook. They conclude that facts are different from imagination, and that on many issues, French feminists could actually look to the U.S. for inspiration. This book offers the first comparative critical appraisal of how women live in the US and in France and suggests paths of reflection on what women can do to improve their lives in the twenty-first century. This is a must read for anyone interested in the nature of womanhood today in the Western World.

socioeconomic structures download: Tourism and Socio-Economic Transformation of Rural Areas Joanna Kosmaczewska, Walenty Poczta, 2021-05-24 This book aims to fill a gap in the current literature by tracing the rural transformation process and the development of rural tourism functions in Poland over the last 30 years. It examines the socioeconomic transformation between 1989 and 2019 that resulted in the formation and development of Polish rural tourism and the various practices associated with it. This timely topic is addressed in a central and eastern European context and sparks interest in further in-depth analysis due the diversity and magnitude of the transformation processes undertaken by the Polish rural areas. Since Polish rural areas constitute as much as 30% of the total rural areas in all new European Union member states, this book adds value through an in-depth statistical analysis of the pace of socioeconomic changes in Polish rural areas. It delves into the creation and consumption of tourism services locally, as well as the impact of global trends on the development of rural tourism in Poland.
