**the eye of minds pdf:** Disability Identity in Simulation Narratives Anelise Haukaas, 2023-12-14 Disability Identity in Simulation Narratives considers the relationship between disability identity and simulation activities (ranging from traditional gameplay to more revolutionary technology) in contemporary science fiction. Anelise Haukaas applies posthumanist theory to an examination of disability identity in a variety of science fiction texts: adult novels, young adult literature and comics, as well as ethnographic research with gamers. Haukaas argues that instead of being a means of escapism, simulated experiences are a valuable tool for cultivating self-acceptance and promoting empathy. Through increasingly accessible technology and innovative gameplay, traditional hierarchies are dismantled, and different ways of being are both explored and validated. Ultimately, the book aims to expand our understandings of disability, performance, and self-creation in significant ways by exploring the boundless selves that the simulated environments in these texts allow.

**the eye of minds pdf: The Science of Fate** Hannah Critchlow, 2019-05-02 **\*\*THE SUNDAY TIMES BESTSELLER\*\*** 'Truly fascinating' DAILY TELEGRAPH 'Acute, mind-opening, highly accessible - this book doesn't just explain how our lives might pan out, it helps us live better' BETTANY HUGHES 'A humane and highly readable account of the neuroscience that underpins our ideas of free will and fate' PROFESSOR DAVID RUNCIMAN So many of us believe that we are free to shape our own destiny. But what if free will doesn't exist? What if our lives are largely predetermined, hardwired in our brains - and our choices over what we eat, who we fall in love with, even what we believe are not real choices at all? Neuroscience is challenging everything we think we know about ourselves, revealing how we make decisions and form our own reality, unaware of the role of our unconscious minds. Did you know, for example, that: \* You can carry anxieties and phobias across generations of your family? \* Your genes and pleasure and reward receptors in your brain will determine how much you eat? \* We can sniff out ideal partners with genes that give our offspring the best chance of survival? Leading neuroscientist Hannah Critchlow draws vividly from everyday life and other experts in their field to show the extraordinary potential, as well as dangers, which come with being able to predict our likely futures - and looking at how we can alter what's in store for us. Lucid, illuminating, awe-inspiring The Science of Fate revolutionises our understanding of who we are - and empowers us to help shape a better future for ourselves and the wider world.

**the eye of minds pdf: *Preventing Crime*** Tore Bjørge, 2016-01-26 Traditional schools of crime prevention, like the criminal justice model, social crime prevention or situational crime prevention, have proved to be too narrow and do not combine well with other approaches. However, each of these models provides important insights and contributions for reducing crime. By extracting the main preventive mechanisms of these diverse approaches, this book develops a more holistic, general model that consists of nine preventive mechanisms: building normative barriers to crime, reducing recruitment, deterrence, disruption, incapacitation, protecting vulnerable targets, reducing benefits of crime, reducing harm, and facilitating desistance. The measures to activate the preventive mechanisms may differ according to the type of crime, as may the actors in charge of implementing the relevant measures. However, Tore Bjørge demonstrates how his model of crime prevention can be effectively applied to diverse forms of crime, from domestic burglaries to criminal youth gangs and driving under the influence to organized crime and terrorism. In doing so, this important book will be of interest to scholars and students of policing, security studies and criminology, as well as practitioners and policy-makers.

Do you assume that certain classes and careers won't appeal to her? *Count Girls In* challenges these assumptions and presents a totally different way of thinking: there is a place for all girls and young women—not just the science fair winners and robotics club members—in science, technology, engineering, and math (STEM) fields, if we can keep their (and our) minds and options open and meet them where they are. To succeed in STEM fields today, girls don't have to change who they are. A girl who combines her natural talents, interests, and dreams with STEM skills has a greater shot than ever before at a career she loves and a salary she deserves. *Count Girls In* encourages parents and other adults to raise authentic young women who have the confidence to put STEM to work in a way that best serves them and their passions. The authors, both STEM professionals, present compelling research in a conversational, accessible style and provide specific advice and takeaways for each stage of schooling, from elementary school through college, followed by comprehensive STEM resources.
