the bean trees ebook: *Digital Atlas of Economic Plants in Archaeology* R. Neef, RTJ Cappers, RM Bekker, 2012-06-15 The third part of the Digital Plant Atlas presents illustrations of subfossil

remains of plants with economic value. These plant remains mainly derive from excavations in the Old World (Europe, Western Asia and North Africa) that the Deutsches Archäologisches Institut (DAI, Berlin) and the Groningen Institute of Archaeology (GIA) have conducted or participated in. Plant material is usually very perishable, but can nevertheless be preserved in archaeological sites if the biological decay of the material is blocked. Many plant remains are discovered during excavations in carbonized form, where despite having been in contact with fire, they have not been completely reduced to ash. Extremely dry climatic conditions, like those in Egypt, can also preserve plant material in a completely dessicated condition. Most of the economically valuable plants illustrated here have been carbonized or desiccated. So this atlas links up very well with the Digital Atlas of Economic Plants. Like the other atlases, this atlas is a combination of a book and a website. The Book: Just as in part two of the series, this part will not only include illustrations of seeds and fruits, but also of other plant parts. The resulting variety in seed and fruit forms will be illustrated by examples from different excavations. To support their identification and determination, also pictures of recent plants and relevant plant parts have been included. The Website: To supplement the photographs, the website will also include morphometric measurements of the subfossil seeds and fruits. These measurements can be compared with own measurements of the plant taxa in question. Summary: Plant families: 56 Plant species (Taxa): 191 Photographs: 773 photographs of subfossil plant parts, 1137 photographs of recent plants and plant parts Languages: English and 15 indices (scientific plant name, pharmaceutical plant name, English, German, French, Dutch, Spanish, Arab, Arab in transliteration, Turkish, Chinese, Pinyin (Chinese in transliteration), Hindi, Sanskrit, and Malayalam) Purchase of the book grants access to the protected parts of the websites of the project.

the bean trees ebook: Intelligence in the Digital Age Lyn Lesch, 2019-11-15 Intelligence in the Digital Age examines how our current Internet age and people's use of digital technologies may be affecting their mental capacities and emotive lives in ways in which it will become increasingly difficult for those people to explore a larger, more expansive consciousness. After beginning with an examination of how people's attention spans, working memories, and capacity for deep thought and reading are being imperiled by their addictive use of smart phones and PCs, the discussion continues with how this may be occurring at a deep level at which the brain creates short and long-term memories, pays attention, and thinks creatively. The book then explores how these negative effects may impede the search to explore the limits of one's thinking mind and memories in pursuit of a larger intelligence. People may have fewer opportunities to be successful in this pursuit simply because they will have lost access to important personal dynamics due to the effects of the digital world on their minds, brains, and inner lives.

Designed for readers with no science background, the book introduces them to the thought processes used by electrical engineers to think quantitatively and then design useful systems. As a result, readers not only learn the facts behind information and transmission, coding and storage, but how these systems came to be developed in response to a shift of information to a digital medium. Unlike traditional science texts that begin with theory and then illustrate that theory with applications, this book starts with practical, real-world systems and then presents the physical theory and mathematical analysis required to understand their operation.
