totally science links: [Reclaiming Reality](#) Roy Bhaskar, 2010-10-25 Originally published in 1989, Reclaiming Reality still provides the most accessible introduction to the increasingly influential multi-disciplinary and international body of thought, known as critical realism. It is designed to underlabour both for the sciences, especially the human sciences, and for the projects of human emancipation which such sciences may come to inform; and provides an enlightening intervention in current debates about realism and relativism, positivism and poststructuralism, modernism and postmodernism, etc. Elaborating his critical realist perspective on society, nature, science and philosophy itself, Roy Bhaskar shows how this perspective can be used to undermine currently fashionable ideologies of the Right, and at the same time, to clear the ground for a reinvigorated Left. Reclaiming Reality contains powerful critiques of some of the most important schools of thought and thinkers of recent years—from Bachelard and Feyerabend to Rorty and Habermas; and it advances novel and convincing resolutions of many traditional philosophical problems. Now with a new introduction from Mervyn Hartwig, this book continues to provide a straightforward and stimulating introduction to current debates in philosophy and social theory for the interested lay reader and student alike. Reclaiming Reality will be of particular value not only for critical realists but for all those concerned with the revitalization of the socialist emancipatory project and the renaissance of the Marxist theoretical tradition. Roy Bhaskar is the originator of the philosophy of critical realism, and the author of many acclaimed and influential works including A Realist Theory of Science, The Possibility of Naturalism, Scientific Realism and Human Emancipation and Dialectic: The Pulse of Freedom. He is an editor of the recently published Critical Realism: Essential Readings and is currently chair of the Centre for Critical Realism.

are used to solve social problems. The core elements of Society 5.0 include problem-solving and value creation, interdisciplinary skills, diverse opportunities, resilience, and environmental harmony. This concept also highlights the United Nations' 17 Sustainable Development Goals (SDGs), which all individuals and organizations need to face. The promotion of the SDGs from a psychological perspective is believed to be beneficial and aligns with the intention of the United Nations. Sustainable Development Goals (SDGs) can be examined from a microscopic level to understand individuals' mental processes and attitudes toward them. Investigating the relationships between the SDGs and social and positive psychology can benefit their promotion. Discussing the SDGs from a psychological perspective aligns with the intention of the United Nations.

totally science links: *Science But Not Scientists* Vernon L. Grose, 2006-10 The historic Science Textbook Struggle -- a worldwide battle about the origin of the universe, life, and man -- erupted without warning. It caught the scientific illuminati completely by surprise. Why? Because science textbooks had become filled with wild, unbelievable stories about the beginning of everything. And those tales were simply not scientific! The universe starting with a Big Bang, life arising out of a soup of lifeless amino-acids, humans produced by apes . . . those myths had only replaced ancient Greek mythology- and were being passed off as scientific truths! Caught in the crossfire between educators, news media, textbook publishers, religious notables, and world renowned scientists- -- including nineteen Nobel laureates -- was a private citizen. Father of six schoolchildren, he had only one goal: - to prove that science never will have answers for origins! He was up against the arrogance of scientists who were determined to disguise their private beliefs as being the only explanations for the origin of the universe, life, and man. This story concludes with a great victory for objectivity -- with more than 200 changes being made in textbooks --- over the objections of the National Academy of Sciences. All discussion about origins was transformed -- by admission that stories about them are based solely on personal views of individual scientists. Remarkably, 3,000 scientists around the world later signed an affirmation to assure that this issue of belief-over-fact in science never be repeated. Wernher von Braun, father of America's space program, writes in the Foreword: Vernon Grose, in tracing out in *Science But Not Scientists* his personal involvement in the vortex of these two forces, illustrates one more time the humanity of scientists - their likelihood of being just as prejudiced and bigoted as anyone untrained in science. He properly calls for objectivity rather than scientific consensus. He rightly urges that message rather than messenger should be scrutinized and tested for validity. Science will be the richer and humanity the ultimate beneficiary by heeding this clarion call.
