**titanic passenger accounts download: Voyagers of the Titanic** Richard Davenport-Hines, 2012-03-06 "The story of the Titanic has been told many times; this one takes a sociological perspective, with the confident, graceful prose of fine fiction." —Wall Street Journal It has been over one hundred years since the sinking of the passenger liner Titanic in the North Atlantic, yet worldwide fascination with the epic tragedy remains as strong as ever. With *Voyagers of the Titanic*, Richard Davenport-Hines gives us a magnificent history of the people intimately connected with the infamous ship—from deal-makers and industry giants, like J.P. Morgan, who built and operated it; to Molly Brown, John Jacob Astor IV, and other glittering aristocrats who occupied its first class cabins; to the men and women traveling below decks hoping to find a better life in America. *Voyagers of the Titanic* offers a fascinating, uniquely original view of one of the most momentous catastrophes of the twentieth century. "Impressive in both its writing and reporting." —USA Today "Eloquent and absorbing." —The Telegraph (UK) "This will not be the last book on the Titanic, but it is a safe bet that there will not be a better." —The Spectator (UK) "Bolstered by photographs of the people who built, staffed, sailed on and survived the Titanic, Davenport-Hines finds a slew of new points of view from which to scan history." —Denver Post "Utterly compelling." —Sunday Times (UK) "Paints a provocative portrait of the "upstairs, downstairs" social stratification in play aboard the doomed ship." —Entertainment Weekly "An astonishing work." —Julian Fellowes, Creator and Executive Producer of *Downton Abbey* "A haunting story of real, intersecting lives on a collision course with destiny." —Kirkus Reviews

**titanic passenger accounts download: Project-Based R Companion to Introductory Statistics** Chelsea Myers, 2020-12-23 *Project-Based R Companion to Introductory Statistics* is envisioned as a companion to a traditional statistics or biostatistics textbook, with each chapter covering traditional topics such as descriptive statistics, regression, and hypothesis testing. However, unlike a traditional textbook, each chapter will present its material using a complete step-by-step analysis of a real publicly available dataset, with an emphasis on the practical skills of testing assumptions, data exploration, and forming conclusions. The chapters in the main body of the book include a worked example showing the R code used at each step followed by a multi-part project for students to complete. These projects, which could serve as alternatives to traditional discrete homework problems, will illustrate how to put the pieces together and conduct a complete start-to-finish data analysis using the R statistical software package. At the end of the book, there are several projects that require the use of multiple statistical techniques that could be used as a take-home final exam or final project for a class. Key features of the text: Organized in chapters focusing on the same topics found in typical introductory statistics textbooks (descriptive statistics, regression, two-way tables, hypothesis testing for means and proportions, etc.) so instructors can easily pair this supplementary material with course plans Includes student projects for each chapter

which can be assigned as laboratory exercises or homework assignments to supplement traditional homework Features real-world datasets from scientific publications in the fields of history, pop culture, business, medicine, and forensics for students to analyze Allows students to gain experience working through a variety of statistical analyses from start to finish The book is written at the undergraduate level to be used in an introductory statistical methods course or subject-specific research methods course such as biostatistics or research methods for psychology or business analytics. Author After a 10-year career as a research biostatistician in the Department of Ophthalmology and Visual Sciences at the University of Wisconsin-Madison, Chelsea Myers teaches statistics and biostatistics at Rollins College and Valencia College in Central Florida. She has authored or co-authored more than 30 scientific papers and presentations and is the creator of the MCAT preparation website MCATMath.com.
