tottaly science: Common Science? Jean Barr, Lynda Birke, 1998-07-22 The roots of the exclusion and alienation of women and minorities from scientific knowledge may well lie in how science itself is taught. While academic feminist critiques of science and science education are important, the authors believe that more attention has to be paid to what non-academics think and feel about science. Here is a starting point for developing a feminist pedagogy around science in the larger community.

tottaly science: *The New Husserl* Donn Welton, 2003-08-21 The recent first-time publication of works from Edmund Husserl's later years, especially his Freiburg period, combined with new studies

of his method and theories, has stimulated a remarkable shift in perceptions of the scope and significance of Husserl's transcendental phenomenology. Informed by a deep reading of not just the works published during Husserl's lifetime but also the countless lectures and manuscripts he wrote in his later years, the essays in *The New Husserl* provide an alternative approach to Husserl by examining his work and his method as a whole and by probing issues, old and new, that occupied him during this exceptionally productive period. The noted Husserl specialist Klaus Held opens the book with two essays, published here in English for the first time, that provide an insightful and lucid introduction to Husserl's central texts. Other prominent Husserl scholars treat his most important and lasting contributions to philosophy, such as the concept of intentionality, the theory of types, time-consciousness, consciousness and subjectivity, the phenomenological method, and the problem of generativity. By inviting readers to discover this new Husserl, the present collection is likely to shape scholarly discussions of Husserl's thought for some time to come.

tottaly science: All Scientists Now Marie Hall, Marie Boas Hall, 2002-06-20 The history of the Royal Society in the nineteenth century is published as a full-length account for the first time in this book. Dr Marie Boas Hall has meticulously explored this fascinating period, using the Royal Society's

own records. In 1800 the Royal Society was a leisurely club for scientists, scholars/politicians and patrons of science and learning. More important, it was a centre for improving knowledge of the natural sciences, and adviser to the Government on scientific matters. The first half of the book describes the manner of transition; the struggles and controversies among the most eminent scientists of the day. The second half concerns the emergence of the Royal Society as once again a leader of scientific opinion, as the recognised intermediary between science and Government, and as the chief advisory body to the Government. In the nineteenth century it became, in fact, the national academy of science.

tottaly science: *Marconi My Beloved* Maria Cristina Marconi, 2002-04 When in 1895 twenty-one-year-old Guglielmo Marconi made his first wireless transmission over land, he became the boy wonder of the world. When subsequently, he made similar transmissions across the Atlantic Ocean, thus proving to the world that his radio-related inventions had immediate and wide-spread applications for all of humanity, young Marconi ushered in the Age of Communication. The life, the works, the character of one of the greatest scientists of this Century, Guglielmo Marconi, the inventor of the Radio, are described in this carefully documented, impassioned and deeply involved book by an exceptional witness: his wife Maria Cristina. He was called 'The genius who gave a voice to silence'. Acclaimed by the whole world, the recipient of the most prestigious honours and decorations, he never lost his innate modesty and discretion even at the height of his success.

tottaly science: Mastering Public Administration Brian R. Fry, Jos C.N. Raadschelders, 2013-01-15 In *Mastering Public Administration*, each chapter spotlights a significant theorist in the field, covering his/her life, research, writings, and impact, introducing the discipline's most important scholarship in both a memorable and approachable manner. The combination of biographical narrative with explanation and analysis makes abstract theories understandable while showing how subject scholars relate to each other in their work, providing much needed context. The book's chronological organization shows the evolution of public administration theory over time. With the new edition, the authors will be adding mini-chapters that link contemporary scholars and their research to the seminal literature.

tottaly science: Two Prospectors Sam Shepard, Johnny Dark, 2013-10-15 Pulitzer Prize-winning author of plays such as *True West*, *Fool For Love*, and *Buried Child*, and Academy Award-nominated actor in many films, including *The Right Stuff*, Sam Shepard is arguably America's finest working dramatist. He has said many times that he will never write a memoir. But he has written intensively about his inner life and creative work to his former father-in-law and housemate, Johnny Dark. This book gathers nearly 40 years of their correspondence, which provides the most honest and complete record of Shepard's professional and personal lives that he is ever likely to publish. The book is illustrated with Dark's candid, revealing photographs of Shepard and their mutual family across many years, as well as facsimiles of numerous letters. It makes a perfect companion to Treva Wurmfeld's recent film, *Shepard & Dark*--

tottaly science: *Language in Biodanza* Kateřina Strnadová, 2025-09-24 This book is devoted to Biodanza, a system based on the integrative vivencias induced by dance, music, singing and situations of encounter in a group, where vivencia is an experience lived by an individual with great intensity in the present moment, which includes emotional, cenesthetic and organic functions. The aim of this book is to show the maximum breadth of linguistic aspects related to Biodanza, to present the possibilities that Biodanza offers in the field of language education, to highlight its linguistic specificities and to outline the possibilities for further research of the language in Biodanza. The book is divided into a theoretical and a research part, with the theoretical part summarizing ideas related to the linguistic aspects of Biodanza that can be found in the work of the founder of this system - who is the Chilean educator, psychologist and anthropologist Rolando Toro Araneda - and his followers. The linguistic portfolio of Biodanza and the linguistic aspects in the three essential

areas of verbal communication in Biodanza, which are silence or the absence of language, spoken language and written language, are described in detail. The research part of this book then looks at areas related to both the absence of language and spoken and written language in Biodanza in an attempt to answer the basic research question: What is the potential of language in Biodanza?

totally science: Ignorance Explosion Julius Lukasiewicz, 1994-12-15 The author reveals the darker side of Western society's adoption of, and adaptation to, modern technology. Despite his portrayal of an increasingly complex, artificial and dehumanized technological environment, Lukasiewicz writes with humour and humanism and makes an enlightening contribution to the habitually grim literature on this subject.

totally science: Learning What to Ignore Conrad P. Pritscher, 2013-02-11 The acceptance of reason with uncertainty can help learners successfully manage their occupations and lives during the accelerations prominent in the 21st century. As William Ayers states: "Pritscher tilts his lance at the petrified orthodoxy we call teaching and learning, inviting us on a wild journey into the heart of education." The book elaborates on David Geoffrey Smith's question: "Why does so much educational 'research' today seem so unenlightening, repetitive and incapable of moving beyond itself? The answer must be because it is 'paradigmatically stuck', and cannot see beyond the parameters of its current imaginal space." The book offers help to go beyond the current imaginal space through what is called kaplearning. Kaplearning can help the reader to defamiliarize the common by facilitating "letting go". Pritscher takes an avant-garde approach to learning, pushing the boundaries of the long accepted norm "certainty and order" and modernizing education by trading the old "optimal way" with a new skill to "reason with uncertainty". This resilience to ambiguity is precisely where human intelligence has full advantage over machine intelligence. Pritscher's book is impressive and remarkably well-timed, as recent articles in Nature show that online game players can make surprising breakthroughs in science with a well-chosen confluence of effective sources and a bit of creativity with protein folding. Citizen science has led to solutions that scientists and computer simulators have struggled for years, proving that even with little or no scientific training, knowing what to ignore can invite innovating ways to think and execute. Pritscher's clear and wise insight will definitely serve as an inspiration for the next generation of educators, and prepare the necessary skills for young learners to successfully compete in the future.

totally science: Ecofeminism Jytte Nhanenge, 2011-04-01 Ecofeminism is for those who desire to improve their understanding of the current crises of poverty, environmental destruction, violence, and human rights abuses, and their causes. It is an ecofeminist analysis of modern society's dualized, patriarchal structure, showing that one-sided reductionist, masculine, and quantitative (yang) perceptions inform science, economics, and technology, resulting in subordination of holistic, feminine, and qualitative (yin) values. This yin-yang imbalance manifests as patriarchal domination of women, poor people, and nature, leading to the above crises. Since similar values inform Third World Development, its activities are also exploitative. Thus, rather than improving human well-being, development increases poverty and natural degradation in the South. Modern patriarchy manifests in neo-liberal policies that promote free global economic markets and trades, generating

huge profits to the political and economic elites with devastating results for societies and nature worldwide. Unless we increase our awareness and demand changes that balance the yang and yin forces, patriarchal domination will eradicate life on planet Earth.
