undergraduate accountancy resources: Researching Accounting Education Richard M.S. Wilson, 2016-04-14 There is no doubt that accounting education scholarship and research in Australia is not only thriving, but is amongst the best in the world. Nor is there any doubt that Australian scholars in this field punch well above their weight within the international arena. This book is not derived from a conventional special issue (i.e. one focussing on a specific theme such as audit education, communication in accounting education, or the interface between accounting education and professional training). Instead, it presents a collection of leading edge contributions to accounting education research from Australian scholars on topics which have international relevance. These topics reflect the typical breadth of research in this field being undertaken in Australia - including coverage of students' conceptions of accounting work, the impact of entry mode on accounting students' approaches to learning, listening skills in accounting practice, and student's performance in online accounting courses. Taken together, the contents of this book will help to enhance the educational base of accounting practice by providing guidance to educators in improving their pedagogic practice. This book was originally published as a special issue of Accounting Education: an international journal.

undergraduate accountancy resources: Workplace Learning in Context Alison Fuller, Anne Munro, Helen Rainbird, 2004-01-22 As policy makers increasingly focus on workplace learning as a way of improving organizational performance, the debate about the learning organization has grown. Counterbalancing the often over-optimistic assumptions made about the future of work and learning, this book argues that without a contextualized analysis of the field, our understanding of the learning environment is limited. It reconsiders the true role and nature of workplace learning in context. Grounded in original research, the book features case studies which illuminate how the workplace environment can provide both barriers to and opportunities for learning. It explores learning in different organizational contexts and different countries, sectors, types of public and private sector organization, and by different occupational groups. This multi-disciplinary approach provides a coherent perspective of the institutional, organizational and pedagogical contexts of workplace learning, and as a result, policy-makers, trainers, trade unionists and educators alike will welcome this groundbreaking text, as it gives the intellectual tools required to understand how learning in the workplace can be improved.

undergraduate accountancy resources: **The Routledge Companion to Accounting Education** Richard M.S. Wilson, 2014-04-29 Many enquiries into the state of accounting education/training, undertaken in several countries over the past 40 years, have warned that it must change if it is to be made more relevant to students, to the accounting profession, and to stakeholders in the wider community. This book's over-riding aim is to provide a comprehensive and authoritative source of reference which defines the domain of accounting education/training, and which provides a critical overview of the state of this domain (including emerging and cutting edge issues) as a foundation for facilitating improved accounting education/training scholarship and research in order to enhance the educational base of accounting practice. The Routledge Companion to Accounting Education highlights the key drivers of change - whether in the field of practice on the one hand (e.g. increased regulation, globalisation, risk, and complexity), or from developments in the academy on the other (e.g. pressures to embed technology within the classroom, or to meet accreditation criteria) on the other. Thirty chapters, written by leading scholars from around the world, are grouped into seven themed sections which focus on different facets of their respective themes - including student, curriculum, pedagogic, and assessment considerations.

undergraduate accountancy resources: Litigation Services Handbook, 2015 Cumulative Supplement Roman L. Weil, Daniel G. Lentz, 2015-04-13 The financial expert's guide to best practices for litigation services Litigation Services Handbook is the litigation bible for accountants, economists, and other financial experts. Newly updated to reflect recent rulings and changes in law and procedure, this uniquely useful guide covers all aspects of litigation services, with a focus on investigation throughout. Each chapter is written by an expert in the field, and draws upon their institutional knowledge, experience, and techniques to give you a concrete framework for trial preparation, testimony presentation, deposition, fraud investigation, and more. The discussion includes Sarbanes-Oxley implementation, new technological tools, and the practical consideration of court appearances. The need for financial experts to act as witness and consultant to litigating attorneys is growing faster than litigation itself, and it's important for practitioners offering their services to have a firm grasp of the necessary procedures and expectations surrounding effective financial litigation consultation. This guide provides the most up-to-date case law and best practices financial experts need to know. Understand the accountant's role in litigation Conduct a thorough investigation that proves damages Present your testimony accurately, thoroughly, and eloquently Maintain authority under direct and cross examination Twenty years ago, few certified public accountants or economists offered litigation-related services; now, a large number devote their practice to this area. undergraduate accountancy resources: The Interface of Accounting Education and Professional Training Elaine Evans, Roger Juchau, Richard M.S. Wilson, 2014-07-16 Over many decades the global development of professional accounting education programmes has been undertaken by higher education institutions, professional accounting bodies, and employers. These institutions have sometimes co-operated and sometimes been in conflict over the education and/or training of future accounting professionals. These ongoing problems of linkage and closure between academic accounting education and professional training have new currency because of pressures from students and employers to move accounting preparation onto a more efficient, economic and practical basis. The Interface of Accounting Education and Professional Training explores current elements of the interface between the academic education and professional training of accountants in Australia, New Zealand, South Africa and the UK. It argues for a reassessment of the considerations and requirements for developing professional accounting programs which can make a student: capable of being an accountant (the academy); ready to be an accountant (the workplace); and professional in being an accountant (the professional bodies). This book was originally published as a special issue of Accounting Education: An International Journal.
